

ABSTRACT OF THE DISCLOSURE

IMPROVEMENTS IN AND RELATING TO DOUGH HANDLING APPARATUS

- 5 A dough cutting apparatus is disclosed including a plurality of dough cutting members (6), each of which is adapted for cutting a desired shape out of a strip of dough. Each dough cutting member is spaced apart from an adjacent cutting member by a predetermined distance so that when each cutting member cuts a dough cut-out from the strip of dough, there is a relatively narrow web (101) of waste dough produced in the region between
- 10 adjacent dough cutting members. There is also a waste dough web removing apparatus (50) which has a plurality of fingers (51, 52, 53) for urging the waste dough web upwardly for separation from the dough cut-outs.
